

1. All code for this assignment (querying through database, retrieving data from database before making API call) can be found in

Code/routes/index.js

2. The commented JSON schema for the restaurant objects can be found below:

```
var mongoose = require('mongoose');
var Schema = mongoose.Schema;

var restSchema = new Schema({
  term: String, //this saves the search word the user inputted; required
  location: String, //this saves the location the user inputted; required
  data: String //saves the data that was retrieved from Yelp the first time this exact term
               and location were inputted together by the user; required
});

module.exports = mongoose.model('restaurant', restSchema); //don't forget to export
```

3. API sequence diagram for part 3 of this assignment can be found in

Documentation/API Sequence Diagram
